## ENERGIA Gender and Energy Research Programme Joy Clancy, Principal Investigator break-out session

30 May 2017, Loughborough

## The Need for Research

- Funded by DFID 2014-2019
- Research on gender and energy for policy and practice
- Providing the evidence that taking a gender approach works

# What's a gender approach?

### Starting point:

- a full recognition of women's and men's different needs for energy, based on consultations that consciously seek advice from both women and men;
- recognition of the potential of women and men to participate in energy supply;
- recognition of the need to tackle institutional barriers that limit women's participation in energy planning and production

# Gender approach

- uses gender analysis, and asks: who is doing what, who owns what, who makes decisions about what and how, and who gains and who loses in a planned intervention.
- Gender helps explain household responses to energy interventions, nature of benefits and where they accrue
- Takes into account the external environment (eg formal and informal institutions)

# What's wrong with the evidence?

- Little quantitative evidence this convinces policy makers
- Small-scale, qualitative case studies (little ethnographic work!)
- Self-reporting
- Data gathering unlikely after 6 to 12 months of intervention 'completed'
- Use of gender neutral terms (eg community, household, people) even in stoves projects!
- Concepts not clear (impacts, benefits; women ≠ gender)
- Groups are treat as homogeneous (age, civil status, ethnicity, economic group)

# ENERGIA Gender and Energy Research Programme

### **Objectives:**

- A stronger <u>understanding of the linkages between energy, poverty</u> and <u>gender</u>
- <u>Improved</u> energy access strategies, particularly to benefit women and girls, by <u>identifying which strategies</u> benefit them most.
- Enable decision making about energy sector investments which brings value for money.

**Aim:** a significant improvements in the lives of women and girls due to more effective energy sector investments.

## Outputs

- Body of robust evidence related to linkages between gender, energy and poverty;
- Compelling and effective research into the benefits of a gender approach in energy sector investments;
- Public dissemination of high quality research findings from the research; and
- Research capacity built and linkages established.
- Research findings, case studies and other outputs
- Indicators for MTF tracking

# ENERGIA Gender and Energy Research Programme

**Project 1:** Electrification and women's empowerment (Kenya, Nepal, India)

**Project 2:** Productive uses of energy: the informal food sector (Rwanda, Senegal and South Africa)

**Project 3:** The political economy of energy sector dynamics (India, Nepal);

**Project 4:** Gender and energy sector reform (Bangladesh, India, Nigeria and Indonesia);

**Project 5:** Private sector: Female microenterprise creation and business models (Rwanda);

**Project 6:** Productive uses: Unlocking the benefits (Ghana, Tanzania, Myanmar)

**Project 7:** Women's Empowerment and Entrepreneurship (literature review and cases studies)

#### **Short terms studies:**

**Lessons learned:** Mainstreaming gender in energy sector practice and policy

SEforAll: Levers of Change: How global trends impact gender equality and social inclusion in access to

sustainable energy

## ENERGIA Gender and Energy Research Programme

- 7 consortia of Universities, research institutes, NGO's.
- 12 countries: India, Nepal,
  Bangladesh, Myanmar, Indonesia,
  South Africa, Kenya, Tanzania,
  Rwanda, Nigeria, Senegal, Ghana.

#### **Contextual Factors**

## RQ3 What is the evidence that contextual factors influence more gender equitable outcomes from energy interventions?

C1 How has the political economy influenced gender equitable energy access? (See Slide 13)

C2 What are the socio-cultural, economic, geographical and infrastructural characteristics of the location? How do these characteristics influence gendered outcomes/impacts from energy interventions?

C3 How has taking a gender approach influenced access? (see slide 14)

C4 How is access mediated by gender ideologies and norms?

C5 How is use mediated by gender ideologies and norms?

C6 How are outcomes mediated by gender ideologies and norms?

C7 Have government agencies, development agencies and the private sector adopted a gendered approach?

C8 Which specific characteristics of the context are most significant in removing barriers to the equity of benefits **and outcomes** of the energy **results** chain?

### **Generating Evidence**

access?

RQ1: What is the evidence that there are differential outcomes on women/girls and men/boys of current approaches to energy sector interventions? (sub-RQs E1 to E12)

E1 How are gender issues addressed in energy policy and implementation? (See slide 4) **Energy Policy** E2 How are gender issues addressed by organisations in the energy system? (See slide 5) Organisation of energy supply E3 How has energy sector reform influenced supply? per energy carrier E4 How has SEforAll influenced supply? Energy supply E5 What influences individual's selection of this energy carrier? (see slide 6) E6 Which aspects of energy supply have small impact/high impact on gender equity outcomes? (see slide 7) Access to supply E7 How is access mediated? (See slide 8) and appliances Use of energy services E8 What are the gendered differential determinants of use and benefits? (See slide 9) 1st order outcomes E9 How are the gendered differential first order outcomes linked to energy access? (See slide 10) 2<sup>nd</sup> order outcomes E10 How are the gendered differential second order outcomes linked to energy access? (See slide 11) E11 Which first order outcomes contributed? (See slide 12) E12 Are women able to influence a more gender equitable energy policy? (see Slide 15) **Impacts** 

RQ2 What is the evidence that a gender approach in energy sector interventions leads to more gender equitable outcomes? (see Slide 14)

E13 Has there been a shift in gender relations as a result of gender equitable energy

13

# What's different? What's a challenge?

- Emphasis on synthesis
- Teams are encouraged to collaborate there's a budget

- Getting researchers who normally do qualitative work to do quantitative work
- Researchers doing policy briefs!
